

SOLUTION BRIEF

MANAGED DISASTER RECOVERY SERVICES

Data Resiliency for Rapid Recovery, No Matter What

Your business-critical data, applications and systems need the protection that comes from always-on disaster recovery. At Verinext, we deliver the managed disaster recovery-as-a-service (DRaaS) solution that will reliably protect your environment with the rapid and reliable recovery you need, when you need it.

Compliant, secure and fully managed by data protection experts, and with options including private and public cloud, Verinext Managed Disaster Recovery Services will deliver the real-time replication you need to minimize downtime and ensure business availability without fail.

CONFIDENCE IN THE FACE OF THE UNEXPECTED

Enterprises need confidence knowing their data is consistently available in the face of disaster - no matter what. Yet, building a secondary disaster recovery datacenter site is costly and complex, and may not be as secure as you may think. DRaaS is an ideal alternative. A cloud-hosted solution, DRaaS offers a cost-effective, subscription-based service for data failover when hardware failures, natural disasters or ransomware impacts the primary data center.

Verinext is an expert in delivering DRaaS for the always-on data reliability digital businesses need. Compliant, secure and fully managed by data protection experts, Verinext Managed Disaster Recovery Services can initiate a failover within minutes so business productivity is maintained and continuity assured.

YOUR DATA, RIGHT WHEN YOU NEED IT

Verinext Managed Disaster Recovery Services will protect you from data loss and help ensure your data is available right when you need it. Ideal for ransomware protection as well as disaster preparedness, it features a modern DRaaS architecture that simplifies recovery management, shortens recovery times and helps you meet security and compliance requirements.

Dedicated DR Support Expertise

Rest easy knowing your data and environment is protected with a dedicated team of Verinext data protection experts ready to rapidly recover your environment when and where it's needed.

Cost Efficient OpEx Pricing Model

Get cost-efficient, pay-as-you-use, disaster recovery delivered as-a-service from our modern HPE GreenLake secure edge to cloud platform and avoid the high capital expense of managing your own offsite datacenter.

Secure Geo-Separated Replication

Assure compliance and business continuity with access to our multiple, secure data centers which are geographically separated and replicated for true availability no matter the disaster event.

DISASTER READINESS HAS NEVER BEEN EASIER

Protect your critical workloads and become failover-ready with Managed Disaster Recovery Services from Verinext. Have business continuity at your fingertips with the peace of mind knowing your data is not only protected, but recovery-ready, with managed precision 24/7.

Key benefits of Verinext Managed Disaster Recovery Services include:

- ✓ Customized response and recovery SLAs
- ✓ Elimination of break fix interruptions
- ✓ Ensured security and compliance best practices
- ✓ Geo-redundancy for natural disaster protection
- ✓ Ready “out of the box” with storage, networking and access
- ✓ Fully monitored and managed 24/7
- ✓ No capital investments with simplified billing options
- ✓ Agile and scalable to grow with changing business demands
- ✓ Multiple targets available - including private cloud, public cloud, and secondary datacenters
