

VERINEXT SECURITY SOLUTIONS AND SERVICES

ENHANCE YOUR SECURITY POSTURE AND DEFEND YOUR BUSINESS

Persistent cybersecurity threats are putting your critical systems and vital business information at risk. As hackers evolve in sophistication and their techniques become more advanced, your organization's sensitive data, including intellectual property, customer information, trade secrets, and other critical information can become exposed. With Verinext and our holistic approach, we'll help enhance your security posture - endpoint to cloud - so you can operate with confidence.

KEEP THREAT ACTORS AT BAY

Threat actors are continually evolving their tradecraft and exploits. The only way to beat them at their game is to stay one step ahead and prepare for their attacks with a defense-in-depth approach. The key to success is starting with the right security framework to ensure that your security program doesn't have any critical gaps. What follows is the complex part: elevating and maturing your security program to achieve the security posture that delivers end-to-end protection, rapid response, and business resilience for today's cyber war.

Another key challenge for modern enterprises is human error. Still today, human error remains one of the most common threat vectors. The only way to mitigate this risk is to develop secure behaviors and build a sound security posture that effectively protects against both external and internal threats. At Verinext, we are experts at building a layered security program that educates and protects your users, shields your applications, provides visibility, and protects your data with agility so you can keep devastating threats at bay.

THE VERINEXT SUITE OF SECURITY SOLUTIONS

Verinext has deep expertise in security operations that will help you maximize the value of your security investments. From minimizing your attack surface and performing identity management, to zero trust access control, cyber insurance and more. Verinext can offer strategies to help you protect your data, users, and systems from cyberthreats and breaches so you can operate and grow your business with confidence.

APPLICATION SECURITY

Verinext application security solutions apply best practice procedures to defend applications, including the infrastructure software and hardware supporting them, from external threats and vulnerabilities.

DIGITAL IDENTITY ACCESS MANAGEMENT

Verinext solutions for digital identity access management streamline authorized access with digital asset protection and enable productivity while securing the enterprise and supporting the overall cybersecurity strategy.

WEB SECURITY

Verinext web security solutions protect against cyberthreats for websites, externally facing applications, and accompanying services and data to safeguard online presence and brand reputation.

THREAT ANALYSIS AND PROTECTION

Verinext solutions for threat analysis and protection combine threat monitoring with behavioral analytics, non-signature-based detection, incident response and digital forensic expertise.

DATA SECURITY

Verinext data security solutions leverage digital privacy measures to identify, categorize/tag and classify organizational data. This foundational information can then be used to prevent unauthorized access to local computers data, cloud-based repositories, databases and public-facing websites while also protecting data from exfiltration (DLP) through several varying vectors (including email, public cloud or SaaS-based applications).

NETWORK INFRASTRUCTURE SECURITY

To protect network infrastructure, Verinext delivers solutions that provide physical and software-based preventative measures against unauthorized access, misuse, and malfunction.

OPERATIONS AND INCIDENT RESPONSE

For complete infrastructure and endpoint protection, Verinext solutions for operations and incident response provide prevention, detection and response to known/unknown threats with analytic intelligence.

ZERO TRUST

Verinext zero trust security solutions use practices to enhance cybersecurity by continually verifying and validating users, devices, and applications, providing explicit access and access requests to reduce the risk of unauthorized breaches.

COMPLIANCE

Assuring a compliant environment, Verinext delivers governance, risk management and compliance to avoid expositing digital assets while conforming with pertinent regulations and internal policies.

CYBER INSURANCE

Verinext can provide guidance on what cyber insurance companies are typically looking for as part of your cybersecurity program as well as cyber solutions that meet these requirements and ultimately result in reduced premiums.

THREAT INTELLIGENCE

Verinext threat intelligence solutions provide in-depth intelligence on zero-day threats, advanced persistent threats and exploits along with prioritization recommendations.

MESSAGING SECURITY

Verinext messaging security solutions deliver anti-spam, antivirus, zero-hour malware detection and intrusion prevention to protect emails, chats, and user accounts.

MOBILE SECURITY

Through tailored policy and process protocols, according to business requirements, Verinext mobile security solutions ensure corporate and personal information is always secure.

IOT/OT SECURITY

Verinext IoT and operational technology (OT) security solutions segment devices on their own network with restricted access, monitor activity, and provide intelligent active discovery.

ENDPOINT SECURITY

Verinext endpoint security solutions use policies, reporting and forensics to protect devices from zero-day and advanced threats including ransomware, viruses, worms and bots.

CLOUD SECURITY

Verinext cloud security solutions provide visibility, context, and risk prioritization without impacting your business' ability to innovate at the pace the cloud offers.

MANAGED SECURITY, 24/7

At Verinext, our security experts possess the capability to craft and provide tailored security operations services that effectively align with your business, considering cost, sophistication, and seamless integration, thereby mitigating risks to ensure security and compliance reliably achieved.

Are you ready for the comprehensive security and risk management you need to protect your data and your brand? Talk to the Verinext experts today to learn how. Visit verinext.com today.
