

Emerging Technology Briefing

Artificial Intelligence (AI)

The recent growth of large language models and generative AI capabilities has exponentially increased the potential business value of AI while concurrently lowering the cost of entry to leveraging these capabilities. To stay competitive every organization in every industry, at a minimum, should develop a business and technical strategy for AI.

Artificial Intelligence is not new to corporate environments. Over the last decade many technology vendors have embedded some form of AI in their solutions in some way. Recent technical breakthroughs have brought it to the forefront because they are moving AI from an embedded task-oriented function to a driving capability with multiplying potential on business outcomes and productivity.

During the Artificial Intelligence briefing, Verinext will provide insight regarding how to leverage AI across multiple use cases and the critical prerequisites for your organization to harness value from the emerging AI landscape. This interactive briefing aims to contextualize market capabilities with the needs of your enterprise. Participants are provided with an overview of current design considerations around AI platforms and an opportunity to collaborate with design specialists in the field.

DISCUSSION FRAMEWORK:

1. Introduction: Industry and Marketplace Context

- An overview of the current AI landscape and its emerging impacts in today's digital business
- A brief discussion on industry trends, common use cases, and the hurdles that businesses should be aware of in implementing AI

2. Key Design Considerations in Artificial Intelligence (AI)

- Discuss the impact on your Cloud/Infrastructure and Data Management strategies to enable your enterprise to leverage AI at scale
- Understanding the challenges in integrating AI with your existing IT solutions and the resultant security and compliance implications
- Case studies: Lessons from other Verinext customers' implementations of AI

3. Workshop Discussion: Use Cases for leveraging AI in Your Organization

- Exploring the key aspects of your organization that can benefit from AI capabilities
- Discussing the impacts/limitations that your current landscape may impose on the path to utilize AI now and in the future
- Lay out next steps for your organization to continue their journey towards leveraging AI

EXPECTED OUTCOMES:

The goals of this briefing are to enhance your Artificial Intelligence Posture with the following:

- Understanding the aspects of AI and how they can benefit your organization
- Tailoring the high-level steps to suit specific organizational needs and scenarios
- Setting a cadence to stay updated in a rapidly evolving AI landscape
- Defining the next steps to develop a roadmap and implement quick wins in your enterprise

RECOMMENDED PARTICIPANTS:

CIOs, CISOs, Information Technology Leaders, Line of Business Owners, IT Architects, and Digital Transformation champions.

Expected time: 90 minutes.
